

PRODUCT OVERVIEW

SECURE ADVANCED BUSINESS SECURITY IN SAGE 100

Advanced Security Enhancements in Sage 100 offers enhanced protection against the evolving landscape of security threats. While traditional measures like antivirus software and hardware firewalls mitigate risks, they can occasionally disrupt the seamless operation of your Sage 100 ERP system. Our specialized enhancements are designed to effectively mitigate these risks, ensuring both robust security and uninterrupted functionality for your critical business operations.

KEY BENEFITS

Enhanced User Tracking: Gain detailed insights into user activities and system interactions, allowing for better management and accountability across your organization's operations.

Division - Specific Controls: Tailored security measures to specific divisions or departments within your organizations, ensuring that access rights and permissions align with individual needs and responsibilities.

Detailed Audit Trails: Maintain comprehensive logs of system actions and changes, providing a clear audit trail for compliance purposes and facilitating swift identification and resolution of security incidents.

Customizable Protection: Configure security settings and access controls to align with your organization's unique requirements and regulatory compliance, ensuring robust protection without compromising operational efficiency.

Uncompromised Functionality: Safeguard system integrity and performance while ensuring that security measures do not hinder day-to-day operations, enabling seamless productivity across all levels of your business.
