DSD MULTI-BIN MANAGEMENT
SAGE 100 ERP ENHANCEMENTS

Sage Tech Partner

PRODUCT OVERVIEW

MANAGE WAREHOUSE INVENTORY LOCATIONS IN SAGE 100

Effective inventory management is crucial for timely customer service and maintaining optimal stock levels. The Multi-Bin Management solution enhances Sage 100's inventory management by not only tracking quantities but also precisely locating items within the warehouse. This module, exclusive to Sage 100, is both simple to install and use, significantly improving the efficiency of warehouse operations by offering detailed insights into item locations.

KEY BENEFITS

Maintain a Structure and Segments for Bin Locations: Establishes a clear organizational framework for bin locations, enhancing findability and storage efficiency.

Enable Multi-Bin by Product Line, Company, Warehouse, or Item Code: Offers flexibility in applying multi-bin functionality across different levels of inventory categorization.

Easily Setup Multi-Bin Inventory with Initial Bin Transfer: Simplifies the initial implementation of multi-bin management, ensuring a smooth transition and setup.

Set Customer or Item Specific Restrictions Based on Bin Location: Allows for customized storage strategies by restricting certain items or customer stock to specific bins.

Perform On-the-Fly Bin Location Transfers: Facilitates quick and easy adjustments to bin locations as needed, supporting dynamic warehouse environments.

Auto-Generate Bin Locations: Streamlines the process of creating and assigning new bin locations, enhancing efficiency in expanding inventory spaces.
